```

```
3'), on total mouse RNA [provided by Minoru Ko, Wayne State Univ.]; double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT713 vector. Library went through one round of normalization, and was constructed by Bento Soares and M. Fatima Bonaldo. "

Inhermopoletin receptor (HR) NR6.1 is a form of the novel HR NR6.

Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and 1t's differentiation and survival of a wide variety of cells. The HR and 1t's to requilate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in the and survival. The products can also be used for detection and diagnosis, sequence 1629 BP; 336 A; 541 C; 453 G; 299 T;

the haematopoietin receptor superfamily, used in the method of the invention for the modulation of cell proliferation, or the immune response. Transformed mammalian cells are used to produce recombinant U4 protein. The U4 protein is used to screen for specific binding agents, raise markers for isolation of cognate ligands and receptors, and in pharmaceutical compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune deficiency, inherited or the result of infection, autoimmune diseases, cancer, and allergy). 318 A; 552 C; 478 G; 308 T;

The present sequence encodes a protein designated Zcytor5, which is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-lon cardiac pathologies, so preventing heart blood, and to discover other possible Zcytor5 ligands. A probe and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the and integrity of the Zcytor5 gene on chromosome 19. Antibodies and therapeutically to modify Zcytor5 ligand effects.

The present sequence encodes an allelic varaint of protein designated Scytors, which is a cytokinin-like receptor. Soluble Zoytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the frifect of cardiotrophin-1 on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            17-MAR-1999 (first entry)

CDNA encoding an allelic varaint of human 2cytor5.

Zcytor5; cytokinin-11ke receptor; down-regulation; growth factor; maintenance factor; thyroid; heart; skeletal. muscle; cardiotrophin-1; cardiac pathology; heart enlargement; Zcytor5 ligand; allelic varaint;
New mammalian cytokinin-like receptor Zcytor5 - useful for, e.g. down-regulating Zcytor5 natural ligands or detecting cardiotrophin-1

New nucleic acid encoding U4 haematopoietin receptor superfamily chain - potentially useful, e.g. for modulating cell proliferation or immune response, for treating cancer and auto:immune disease claim 1; Page 28: 38pp; English.

Claim 1; Page 28: 38pp; English.

Chis is the nucleotide sequence encoding the human U4 protein from the haematopoietin receptor superfamily, used in the method of the invention for the modulation of cell proliferation, or the immune response. Transformed mammalian cells are used to produce recombinant U4 protein. The U4 protein is used to screen for specific binding agents, raise antibodies. It is also used as reagents for assays and in pharmaceutical compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune deficiency, inherited or the result of infection, autoimmune diseases, sequence 1579 BP; 304 A; 535 C; 473 G; 257 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   340
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      360

CDNA encoding human Zcytor5.

2cytor5; cytokinin-like receptor; down-regulation; growth factor;
maintenance factor; thyroid; heart; skeletal muscle; cardiotrophin-1;
cardiac pathology; heart enlargement; 2cytor5 ligand; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Discusler, raye objust, bugstain.

The present sequence encodes a protein designated Zcytor5, which is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe and integrity of the Zcytor5 gene on chromosome 19. Antibodies and therapeutically to modify Zcytor5 ligand effects.

                                                  claim 7; Page 102-104; 182pp; English.

The NRG gene encodes a novel Haemopoietin receptor (HR). Interaction between the novel HR and a lighand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or of rary screening. Sequence 1391 BP; 281 A; 459 C; 417 G; 234 T; screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 660

New isolated haemopoletin receptor - used for developing products for modulating proliferation, differentiation and survival of cells.

To modulating proliferation, differentiation and survival of cells.

Disclosure; Page 101; 182pp; English.

NR6 is a novel haemopoletin receptor (HR). Interaction between the novel NR6 is a novel haemopoletin receptor (HR). Interaction and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in control and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.

Claim 8 Page 108-114; 182pp; English.

The NR6 gene encodes a novel Haemopoletin receptor (HR). Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's products can be used for modulating the activity of the receptors e.g. to requiate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.

```
The present sequence represents an expressed sequence tag (EST) used to identify CDNA encoding a protein designated Zcytor5, which is a cytokinin-like receptor. Soluble Zcytor5 may be administrated to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart of cardiotrophin-1 on cardiac pathologies, so preventing heart of cardiotrophin-1 on the possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the anti-idiotypic antibody could be used to purify Zcytor5 and therapeutically to modify Zcytor5 ligand effects.

The present sequence represents an expressed sequence tag (EST)

used to identify cone encoding a protein designated zcytor5, which is

used to identify cone encoding a protein designated zcytor5, which is

c stokinin-like receptor. Soluble Zcytor5 may be administered to

down-regulate the effects of a growth and/or maintenance factor in

thyroid, heart, and skeletal muscle for example to lessen the effect

c cardiotrophin-1 on cardiac pathologies, so preventing heart

c cardiotrophin-1 on cardiac pathologies, so preventing heart

blood, and to discover other possible Zcytor5 ligands. A probe

comprising Zcytor5 DNA or RNA can be used to determine the presence

and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the

anti-idiotypic antibody could be used to purify Zcytor5 and

therapeutically to modify Zcytor5 ligand effects.

c therapeutically to modify Zcytor5 ligand effects.

14.5dpc embryos [total RNA provided by Minoru Ko, Wayne State Univ., from 2.]; double-stranded cDNA was ligated be Eco Ri adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization, and was constructed by Bento Soares and M.Fatina Bonaldo.
